

A SYSTEMATIC ANALYTIC APPROACH TO EMERGENCY PREPAREDNESS PLANNING

MONDAY, NOVEMBER 19, 2007

2:30 P.M. – 4:00 P.M.

PRINCETON TOWNSHIP MAIN MEETING ROOM

400 WITHERSPOON STREET

PRINCETON, N. J. 08540

All-hazards preparedness efforts can benefit from a systematic analytic approach to understanding and managing a broad spectrum of threats to public health and safety. The Haddon matrix is a simple, yet powerful, conceptual framework for identifying various influencing factors for injury before, during, and after an emergency. This presentation will describe how the Haddon matrix can be applied to aid governments, response agencies, corporations, local businesses, faith groups, media, and community agencies and institutions in their emergency planning efforts and continuity of operations plans.

SPECIAL GUEST SPEAKER

DANIEL J. BARNETT, MD, MPH

Dr. Barnett is an Instructor in the Department of Environmental Health Sciences at Johns Hopkins Bloomberg School of Public Health. He is on the staff of the Johns Hopkins Center for Public Health Preparedness (CPHP) at the Johns Hopkins School of Public Health, where he provides a range of emergency preparedness trainings for the public health workforce.

Dr. Barnett's research interests include best practice models to enhance all-hazards public health emergency readiness and response. Specific areas of focus include design and evaluation of preparedness curricula for public health workers; mental health aspects of public health emergency response; public health readiness exercises; and organizational culture change issues facing health departments in building a ready public health workforce.

Dr. Barnett received his BA in English from Yale University, and his MD degree at the Ohio State University College of Medicine and Public Health. His MPH degree was earned at the Johns Hopkins Bloomberg School of Public Health, and he is a graduate of the Johns Hopkins General Preventive Medicine Residency Program.
