

Click to see how we've helped hospitals recover more than **\$1.54 billion**

***TransUnion® Healthcare Solutions***  
***We Find Money for Providers***  
**WEBINAR | Thursday, May 4th @ 2:00 p.m.**

With the advent of insurance marketplaces and expansion of Medicaid, rising uncompensated care costs make capturing reimbursements more important than ever.

Join us for a webinar with NJHA Strategic Partner TransUnion and trusted provider of revenue cycle management and value-based care solutions for maximizing reimbursements and reducing costs. TransUnion will demonstrate how eScan®, helps uncover more unidentified sources of payment and coverage than anyone in the industry, with over \$9.8 billion in recovered uncompensated care charges and \$1.54 billion delivered back to hospitals. eScan® is a post-service eligibility system designed to maximize reimbursements and reduce uncompensated care costs for a hospital or health system which locates previously unknown coverage on an average of 1-5 percent of a provider's uncompensated care accounts.

The eScan® system leverages patented data mining technology with hundreds of query permutations to deliver a series of automated, customizable reports that identify billable coverage for accounts that are not, and in some cases, cannot be captured on the frontend.

The webinar will highlight how eScan®:

- Runs all accounts against the Medicare Common Working File and state Medicaid databases.
- Ascertain patient demographic discrepancies between the hospital and payer data.
- Identifies commercial policy ID numbers for patients believed to be uninsured.
- Was implemented at Shore Medical Center.

Previewing the eScan® solution during this webinar will be well worth your time!
