

## What's your Strategy for Managing and Disinfecting the Mobile Devices in Your Organization?

[Webinar](#) – January 23 @ 2 PM

***Healthcare providers all around the world are increasing usage of mobile devices in clinical workflows. This trend presents a number of new challenges with infection control and overall device management.***

Join NJHA and Strategic Partner Derive Healthcare for an informative webinar and demonstration of The ElectroClave™, developed by Seal Shield, a world leader in innovative infection control solutions.

Recently chosen by the Centers for Disease Control, the ElectroClave™ delivers proper disinfection, charging, syncing, and asset management through state of the art hardware and software that allows hospitals for the first time true mobility workflow automation; providing vital oversight and insight to IT, Infection Control, clinicians, biomedical, and environmental services.

Christian Davis, Seal Shield's VP of Technology and lead designer of the ElectroClave™, will present the data and demonstrate how this all-in-one-technology will take your mobility strategy to the next level and solve the issues that may impact your organization such as:

- Disinfection Standardization, Validity, and Compliance
- Asset Allocation - Over Purchasing / Under Purchasing
- Inventory Control - Asset Accountability / Asset Preservation
- Clinical Oversight - Mobile Device Patient / Staff Interactions
- MDM Applications - No Physical Behavior Insight
