

# Pediatric Sepsis Two-Part Webinar Series

*New Jersey Hospital Association, Princeton*

EDU 1981W  
WEBINAR

## OVERVIEW:

**Join us for a two-part webinar series on the latest evidenced-based information for the management of pediatric sepsis.**

The resolution on sepsis by the United Nations World Health Assembly in May 2017 recognizes sepsis as a global threat in adults and children and a priority for the World Health Organization to address during the next decade. This resolution on sepsis acknowledges that sepsis represents a major contributor to childhood morbidity and mortality and the associated economic burden. The United Nations Sustainable Development Goal 3 (<https://sustainabledevelopment.un.org/sdg3>) defined specific targets for infections and pandemics.<sup>2</sup> Despite the huge burden that sepsis imposes on the health of children,<sup>3,4</sup> current definitions of pediatric sepsis are of limited value to bedside clinicians to identify cases of sepsis affecting early identification and treatment. We bring this 2-part webinar series to continue the conversation on how we can improve on identifying, treating, and monitoring the septic child in a timely manner.

*JAMA Pediatr.* 2018;172(4):313-314. doi:10.1001/jamapediatrics.2017.5208

**Dr Weiss will also present at the Sepsis Conference - Friday January 24th 2pm - 2:45pm. Presentation: Early Recognition of the Pediatric Septic Patient and Pediatric Sepsis Case Identification for QI and Research.**

## TARGET AUDIENCE:

Physicians, nurse practitioners, nurses, pharmacist and PharmDs

*Speaker: Dr. Scott Weiss*

**Part 1: The Pediatric Sepsis Case Identification for Quality Improvement & Research**

**December 10, 2019**

**1 p.m. – 2 p.m.**
